

## Transform Your Nonstop Code into Business Intelligence

TIC Navigator is an advanced AI-powered platform that automatically analyzes, documents, and understands your HPE Nonstop applications. It builds a living knowledge base of your entire codebase — making it instantly accessible through intelligent search, visualizations, and natural language chat.

### What it is

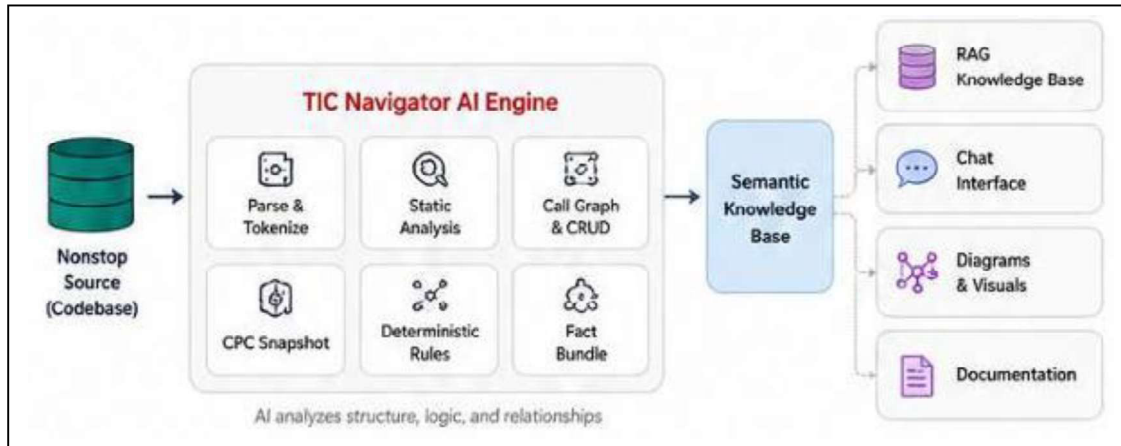

Centralize and manage your entire portfolio of application programs in a structured, AI-ready repository.

### What it does

Automatically summarizes and indexes your code, making it instantly accessible for high-level review and future AI-based queries.

## How TIC Navigator Works

### Core Capabilities

#### Business Rule Extraction

Captures complex logic in COBOL TAL, and TACL in plain business language.

#### Automated Documentation

Generates program guides, data dictionaries, and flow diagrams automatically.

#### Conversational Chat

Ask questions in natural language like "How does credit approval work?" and get instant answers.

#### Impact & Dependency Analysis

Visualize data flows, cross-program dependencies, and change impact before you act.

### Language Supported

COBOL

SCOBOL

TAL

pTAL

TACL

C / C++

Our AI engine understands your Nonstop environment—TMF, process pairs, Guardian, and more. It extracts business logic, metadata, and dependencies to deliver actionable insights in hours, not weeks.
